Clean Water is Healthy Water

Be Conscious of the Water in Your Life

Japan is a country with water in abundance,
Fed by moisture from the oceans raining down on the archipelago.
Across the country pure water flows forth,
Imparting flavor to the food it helps grow, and long life to the people.
But it is a fact that pollution has advanced over the last thirty years.
Now is the time to pay more attention to the life-giving water in our
daily lives.
